

COMPANY PROFILE

Your business has outgrown the spreadsheet. Let's build the system it actually needs.

Antheon audits how you actually operate, then engineers the website, CRM, automation, and AI behind it, built as one connected system instead of five disconnected tools.

- Fewer dropped leads
- Less manual work
- One system, not five tools

SYSTEMS & PROCESS ENGINEERING

— IS THIS WHERE YOUR BUSINESS IS RIGHT NOW?

You've outgrown the spreadsheet. The system hasn't caught up yet.

Most businesses that come to us aren't actually looking for a website. They're feeling the cost of growing past their current process: tools that don't talk to each other, follow-ups that depend on memory, and SOPs that live in one person's head. If any of this sounds familiar, keep reading. This is exactly who Antheon was built for.

Your tools don't talk to each other.

The website, the CRM, the spreadsheet, the invoicing app: every one an island. Someone on your team is the human API, retyping the same information three times a day.

Leads go cold waiting.

A new enquiry sits in an inbox until someone has time to reply. By then, it's already booked with whoever answered first.

The process lives in someone's head.

Your SOPs aren't written down, they're remembered. When that person is out, half the business slows to a walk.

Manual work is eating the week.

Copying data between apps, chasing updates, building the same report by hand. Hours disappear before the real work even starts.

None of this is a website problem. **It's a systems problem**, and that's exactly what Antheon is built to fix.

— ONE CONNECTED SYSTEM, NOT FOUR SEPARATE VENDORS

The website, CRM, automation, and AI: engineered to work as one.

We don't hand you a website and wish you luck. We architect the full system behind your operations, then build each piece so it feeds the next one. Here's what that looks like, and what it actually changes for you.

01 • WEBSITE

**The front door, wired into the system.**

A marketing site, portal, or booking/ordering system built to capture information, not just look good.

What this means for you: every enquiry flows straight into your CRM. No form sitting in an inbox, no lead re-typed by hand.

02 • CRM

**One source of truth.**

A CRM structured around your actual pipeline and data, not a generic template.

What this means for you: your whole team works off the same information. Nothing depends on a spreadsheet tab or one person's memory.

03 • AUTOMATION

**The repetitive work, gone.**

Workflows that connect your tools and move information automatically, without anyone touching them.

What this means for you: hours per week come back to your team, because the handoffs between systems now happen by themselves.

04 • AI LAYER

**A system that works even when you're not looking.**

AI layered into the website, CRM, or automations, drafting responses, qualifying leads, summarizing data.

What this means for you: new leads get a first response in minutes, not days. Your team spends time deciding, not data-entering.

Every one of these is built the same way, starting with **how you already work**. Here's the process.

— HOW WE WORK

We study your business before we touch a single tool.

01

Audit

We map your current tools, workflows, and SOPs exactly as they operate today, not as documented.

YOU GET

An honest picture of where time and leads are actually being lost.

02

Diagnose

We pinpoint the specific bottlenecks: manual steps, disconnected data, missing follow-up, unclear ownership.

YOU GET

A short, prioritized list of what's actually costing you money.

03

Design

We architect how the website, CRM, and automations should connect, before writing a single line of code.

YOU GET

A system designed around your process, not a template with your logo on it.

04

Build

We implement the website, CRM, automation, and AI as one connected build, not separate projects.

YOU GET

A working system on day one, not tools you have to stitch together yourself.

05

Optimize

We keep refining the system as your business and your SOPs evolve, rather than leaving it to go stale.

YOU GET

A system that keeps improving with you long after launch day.

— ANTHEON IN ACTION — A TRAVEL COMPANY EXAMPLE

One booking used to trigger two manual bottlenecks. Now it triggers zero.

A pattern we see often: a booking CRM that only the admin team can access, feeding two manual processes downstream. Here's how we replaced both with real-time systems for a travel company.

Traveler Details Update

BEFORE

-  Traveler books a trip.
-  Booking lands in the CRM, **admin-only access**.
-  Admin manually retypes traveler details into a spreadsheet.
-  On-site managers may work off outdated or wrong info if the update is late.

ANTHEON BUILDS THE SYSTEM

AFTER

-  Traveler books a trip.
-  Booking CRM **auto-syncs in real time**, no admin needed.
-  Spreadsheet updates instantly with accurate traveler info.

✓ On-site managers always have accurate, real-time traveler info.

Booking Numbers Reporting

BEFORE

-  Bookings come into the CRM throughout the day.
-  CRM Manager manually checks and compiles the dashboard.
-  Update gets emailed to the marketing team by hand.
-  Numbers are only as current as his last update. One person, one bottleneck.

ANTHEON BUILDS THE SYSTEM

AFTER

-  Bookings come into the CRM throughout the day.
-  Booking data **syncs automatically**, no manual compiling.
-  Their own Live Booking Dashboard updates in real time.

✓ Marketing sees live booking numbers any time. No manager bottleneck.

— WHY BUSINESSES BUILD WITH ANTHEON

Built like an engineer would build it, because that's who's building it.

We think about your business the way an engineer thinks about a system: audit first, design with intention, build for how it will actually be used. That discipline sits behind every website, CRM, and automation we ship.

Process first, tools second

We start with how you operate, not with a template. The build follows the diagnosis, always in that order.

One team, one system

No handing you off between a web team, a CRM consultant, and an automation freelancer. One team owns the whole build.

Built to evolve

Your SOPs will change as you grow. The system is engineered to change with them, not be rebuilt from scratch.

See where your system is losing time.

Start with a process audit. We'll show you exactly where the bottlenecks are, before you commit to anything.
